

How to Use GM2000

General Description:

Ready To Use (RTU) non-bleaching, biodegradable, water-based cleaning solution that can be sprayed, misted, wiped, fogged or used in immersion processes. Used to clean debris from soft and hard surfaces. If fogged, can be used as a non-mechanical air scrubbing system to remove airborne contaminants and particulates, as well as smoke or mold odors. Has hyper-wetting agents and is moisture seeking and statically charged to draw everything into the fogged droplets.

Dilution Rate:

None = Ready To Use (RTU)

Directions for Use:

NOTE: *Animals and occupants need to leave premises for remediation. Cover any fish tanks. Also, remove any cloths & equipment used if you previously treated with GM6000.*

1. ALWAYS shake or stir container before each use.
2. *For fogging,
 - A. Fill your choice of tri-jet ULV fogger with GM2000 (RTU). *(Tri-jet foggers are specifically used for “wet/cold fogging” and work best with our electrically-charged product as it suspends in the air. Example below.)*

- B. Start fogging at the back of the property and work your way to front door.
- C. No need to wipe off or rinse any surfaces after fogging.

IMPORTANT: For **post-remediation air quality testing, remember you must wait AT LEAST 24 HOURS** after fogging to conduct testing! *(After 24 hours, the product will biodegrade. While the bulk of biological and fungal airborne particulates will be removed after 3-4 hours (the dwell time), there may be moisture particles in the air because of the home being closed up during the dwell time. After 24 hours, these will have naturally evaporated.)* **However, please remember occupants may safely return to the premises after the 3-4 hour dwell time.**

(How to Use GM2000)

3. *For use on carpet or fabric,
 - A. Fill spray bottle with GM2000 (RTU).
 - B. Apply and allow 15 minutes dwell time. *(Agitate surface area if required.)*
 - C. Extract with water.
4. *For content cleaning (leather, vinyl, plastic),
 - A. Fill spray bottle or wet microfiber cloth with GM2000 (RTU).
 - B. Spray or wipe surfaces and allow 5 minutes dwell time.
 - C. Wipe off using a clean, damp cloth/mop. *(May not remove staining. For instance, if a black stain on fabric is caused by mold, the mold may have begun to “eat” the fabric at that point and the item may not be salvageable.)*
5. * For use on hard surfaces,
 - A. Fill spray bottle or wet cloth with GM2000 (RTU).
 - B. Spray or wipe surfaces and allow 5 minutes dwell time.
 - C. Wipe off using a clean, damp cloth/mop.
6. *For immersion processes,
 - A. Immerse items in RTU solution and leave for 10 minutes dwell time.
 - B. Rinse items with water.

***NOTE:** Regardless of procedure used, a second application may be necessary for any heavily-affected areas or surfaces.
